Project Description/Justification:

Federal United States (U.S.) Department of Energy (DOE) funding assists low- and moderate- income families in attaining decent, safe, and affordable housing through cost effective weatherization and rehabilitation of existing homes. Weatherization provides energy efficiency upgrades to homes using the latest building science tools to target heat loss areas and correct them. Installed measures must be cost effective. The program addresses health and safety through tune-ups for heating systems, electrical and chimney repairs, and woodstove improvements.

Weatherization improvements address life-threatening health and safety issues in many homes. Much of Alaska's older housing stock cannot maintain a minimally comfortable indoor temperature. Since

April 2008 and by the end of FY2019, the Alaska Housing Finance Corporation (AHFC) has completed weatherization improvements on approximately 20,162 units. Over 300 units received weatherization assistance in FY2020. Program clients include elderly Alaskans, those with disabilities, and/or families with young children. The average energy cost savings for all homes participating in the weatherization program is \$1,266.

AHFC's ability to properly diagnose and correct problems in existing housing stock through weatherization helps provide a safe, clean environment to clients.

The projected outcomes are:

- Reduce household operating costs;
- Improve resident health and safety;
- Improve durability and longevity of housing stock;
- Replace unsafe heating systems;
- Install smoke detectors in homes; and,
- Install carbon monoxide detectors.
